Experiment 4

Course: 10060 Physics (Polytechnical Foundation), Spring 2026

Criteria	Level 1	Level 2	Level 3
Can sketch an experimental setup.	There is no sketch of the experimental setup.	There is a sketch of the experimental setup but it is unclear in one or more ways.	There is a good sketch c setup with few minor iss missing or being unclear
Can collect and represent data in a suitable manner.	Data is missing or not understandable.	Some important data are missing or are hard to understand. Data is not represented in a table or some other structured way.	All data have been colle but the presentation is r
Can estimate uncertainties on measured quantities.	There are no uncertainties.	There are some uncertainties present but with significant issues such as missing units and too large/small estimates.	Almost all uncertainties minor errors or missing i
Can apply suitable data analysis to determine a physical quantity.	The moment of inertia is not determined or the wrong moment of inertia is determined.	An attempt has been made to determine the moment of inertia but only in one way or with significant errors.	The moment of inertia h in several ways with mir
Can explain the purpose and communicate the results of an experiment.	There is no attempt to explain and communicate the experiment.	Missing explanation or there is no attempt at communicating the experiment.	The purpose is describe municated but there are such as units.
Reflections			
Here is an overall judgement based on elements not covered above.			

Overall Score

Unsatisfactory	Acceptable	Good
